Drillzy

THE INTELLIGENCE LAYER FOR CRITICAL MINERALS — STARTING AT THE DRILL

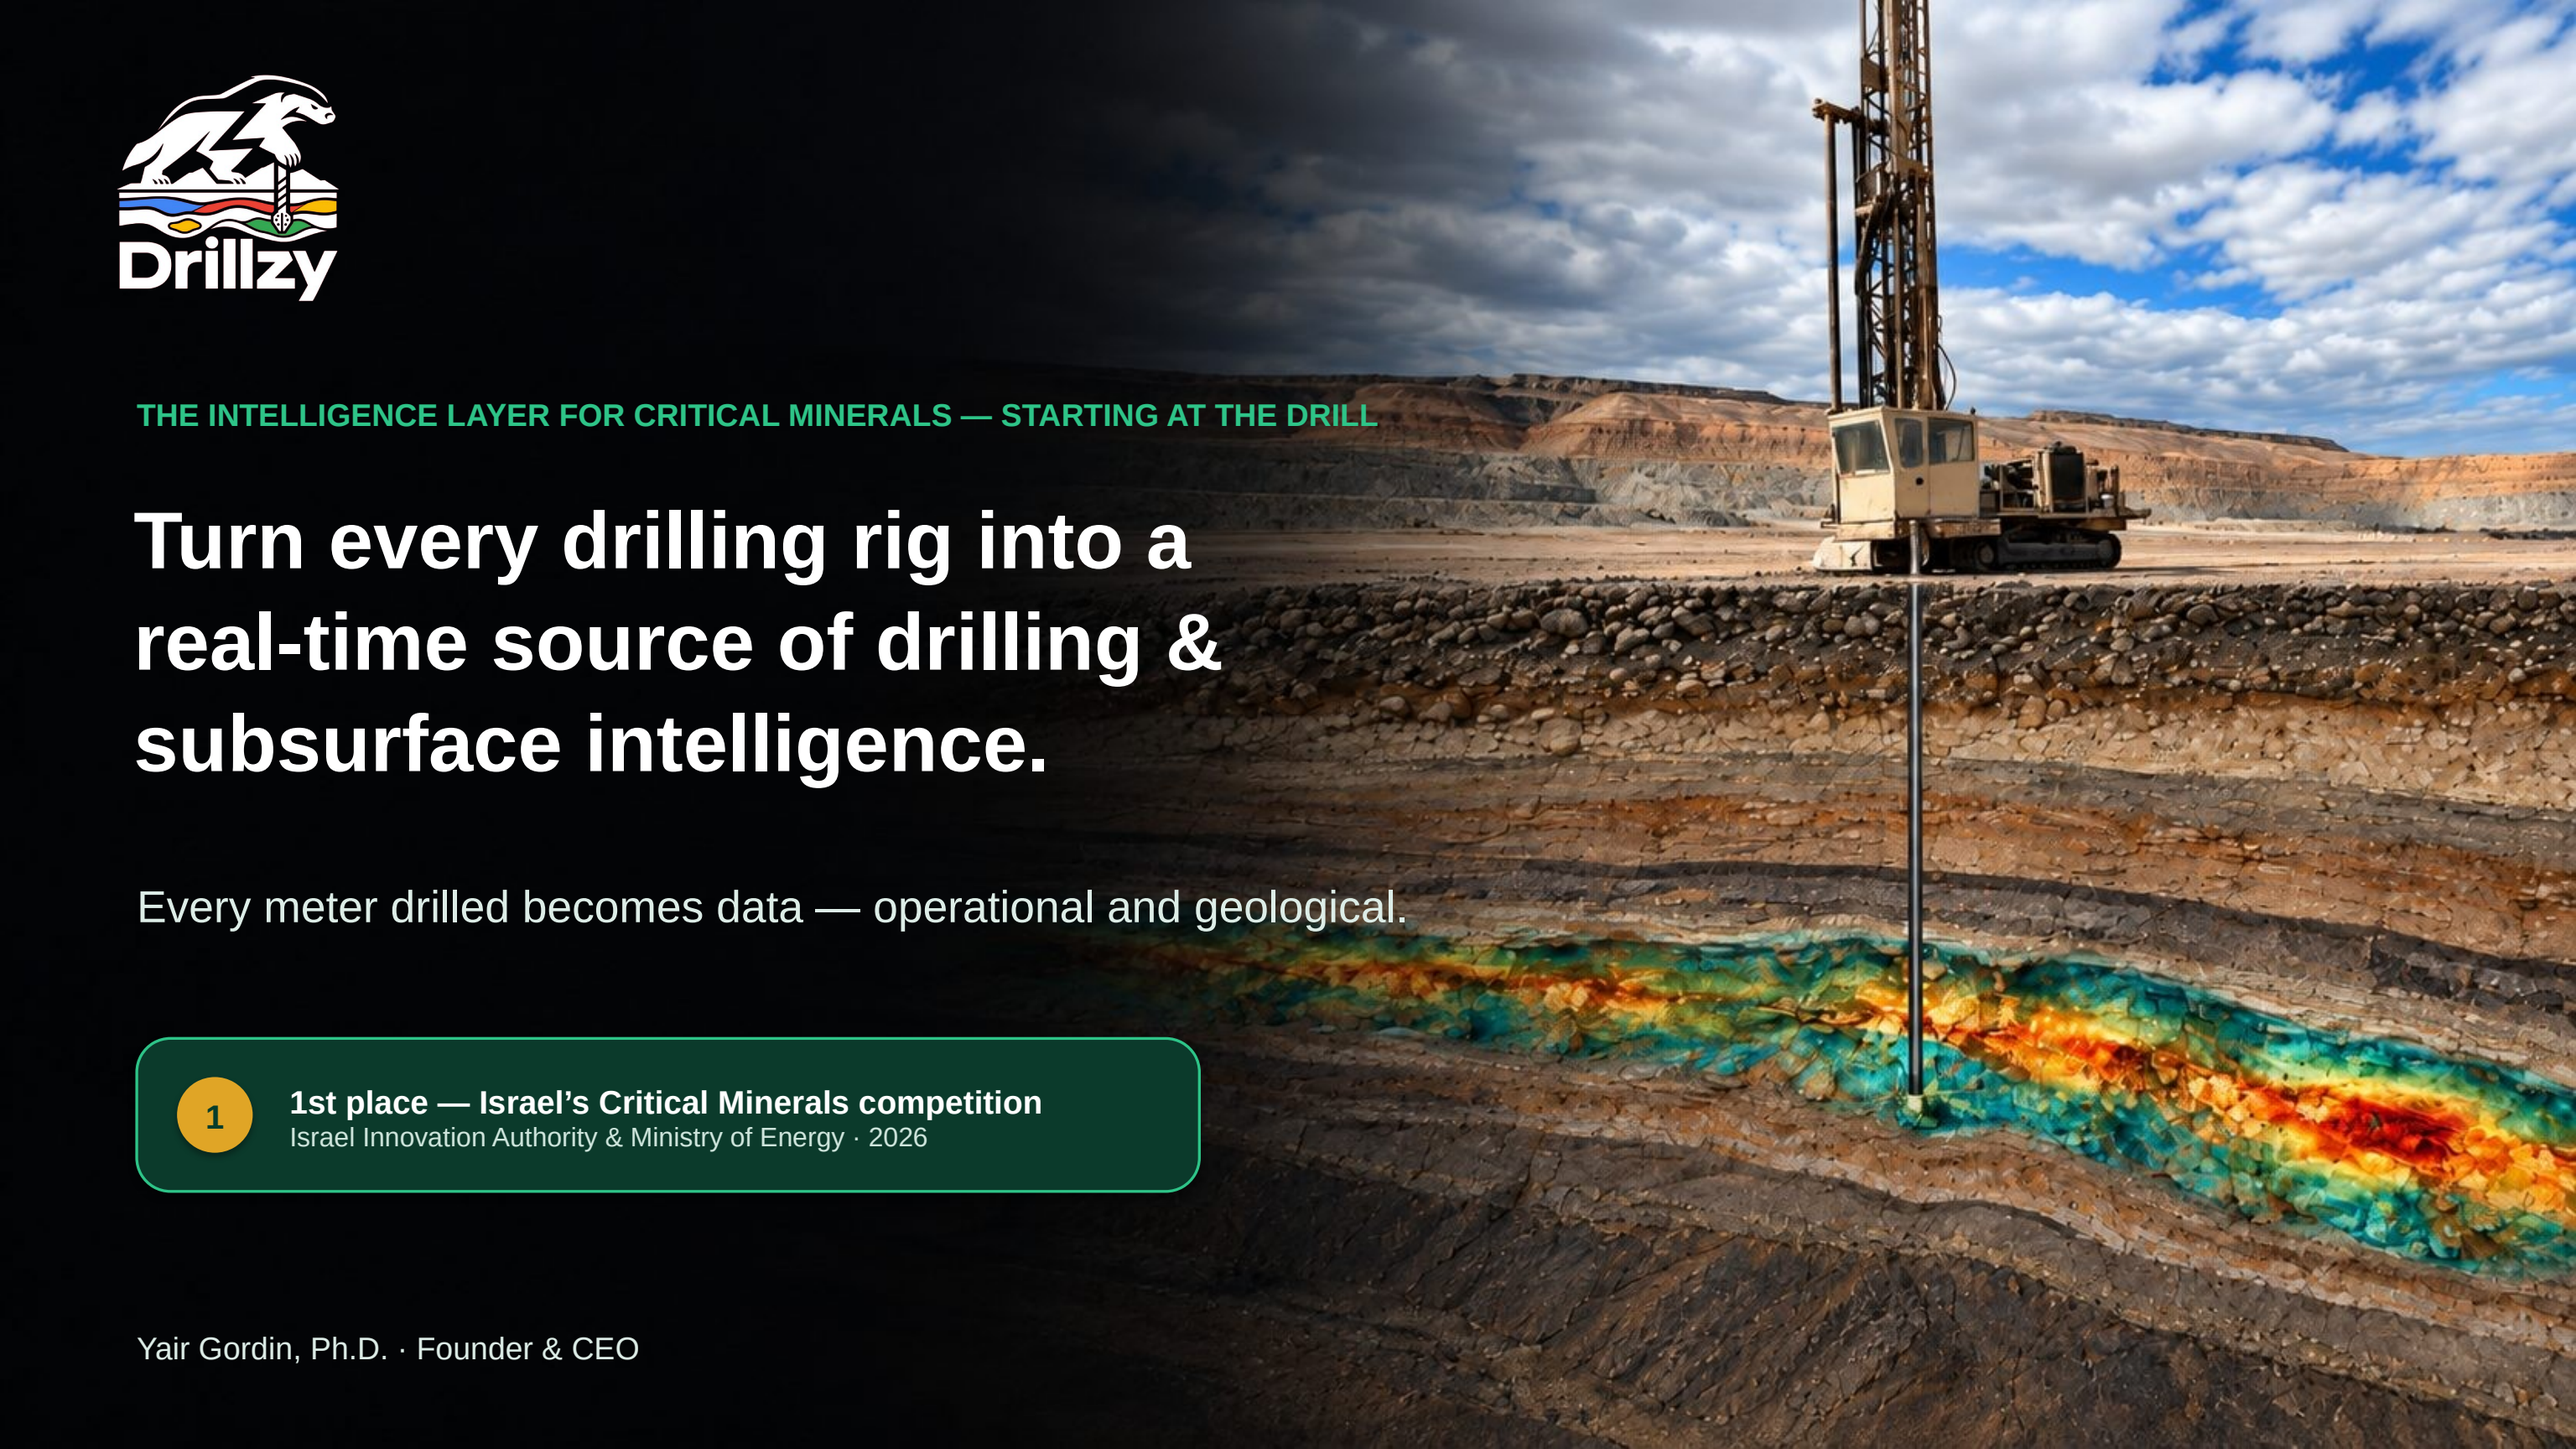

# Turn every drilling rig into a real-time source of drilling & subsurface intelligence.

Every meter drilled becomes data — operational and geological.

1

**1st place — Israel’s Critical Minerals competition**
Israel Innovation Authority & Ministry of Energy · 2026

Yair Gordin, Ph.D. · Founder & CEO

THE PROBLEM

# Every discovery starts at the drill — and that’s where data stops.

A real drilling site: the record of the ground is a notebook and sample trays.

1

## Logged by hand

Subjective — and different with every person.

2

## Mostly never captured

The rig feels the rock every second. Almost none of it is kept.

3

## Too late to act

By the time it is a report, the decision has already been made.

THE SOLUTION

# Make every meter drilled work twice.

**Capture → Process → Deliver** a sensing layer on the rigs already in the field; physics + AI, tied to depth.

1

## Here and now: at the rig

Real-time drilling decisions on site: when to stop, when to sample, where the ore starts and ends.

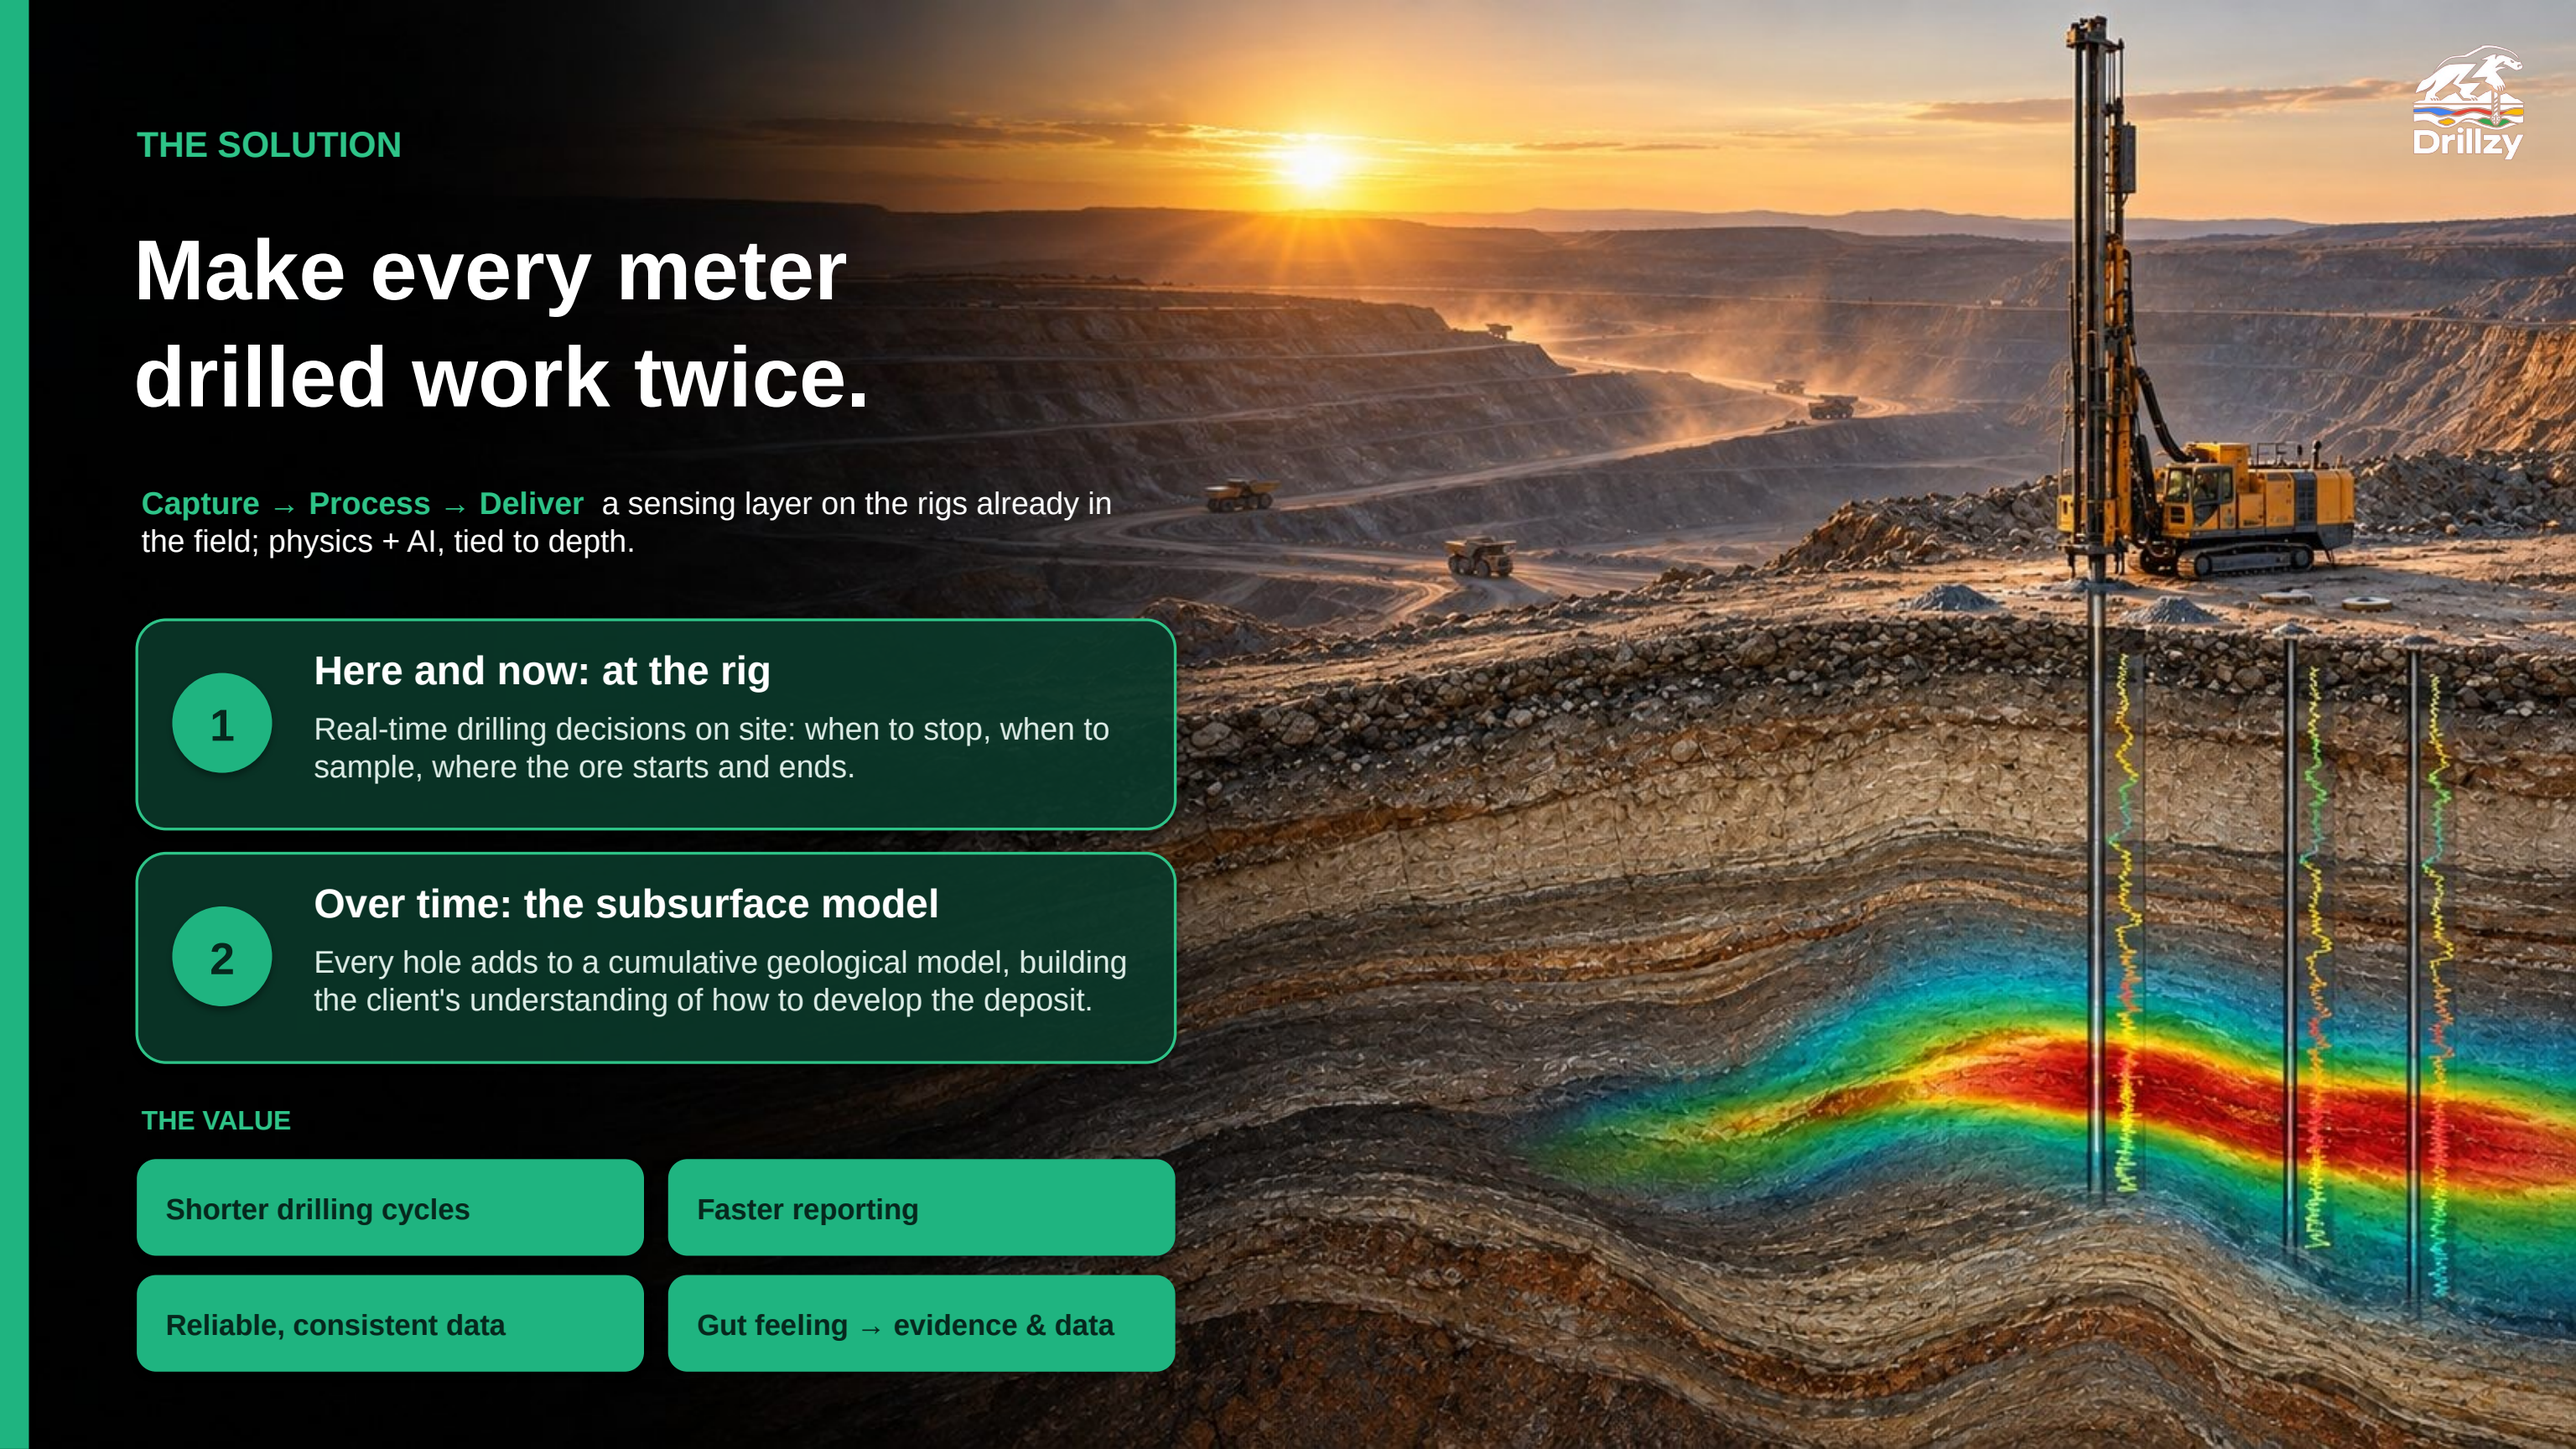

2

## Over time: the subsurface model

Every hole adds to a cumulative geological model, building the client's understanding of how to develop the deposit.

THE VALUE

- **Shorter drilling cycles**
- **Faster reporting**
- **Reliable, consistent data**
- **Gut feeling → evidence & data**

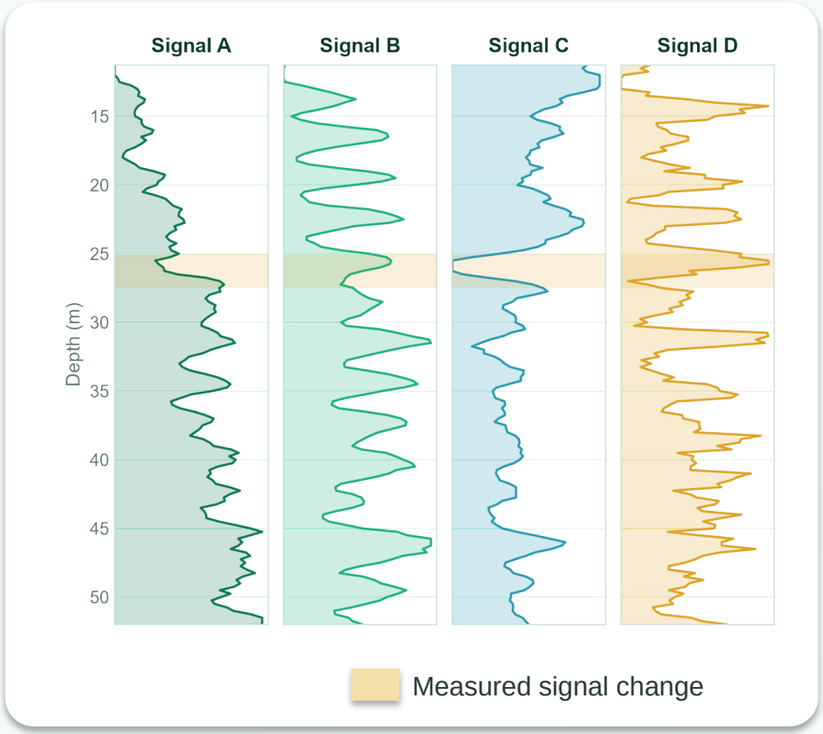

IN THE FIELD

# Real rigs. Real drilling. Real data.

The Drillzy team on a working rig · open-pit mine

Real 52 m borehole · hard-rock site · normalized signals

**30+**

boreholes recorded

**3**

sites, three different geologies

**#1**

Israel's Critical Minerals competition, 2026

## OUR DESIGN PARTNERS

**Mining**
Phosphate mine

**Government body**
Hard rock

**Water utility**
Aquifer

THE PLATFORM

# One shared picture. Three decisions.

Product preview

## Driller

Sees the ground change as it happens. Knows when to stop — and when to sample.

## Operations

Every rig and every hole, against the plan.

## Geology & engineering

A model that updates with every hole — and shows where to drill next.

THE FOUNDER

# Deep geoscience. Real data systems.

## Yair Gordin, Ph.D.

**Founder & CEO, Drillzy**

BACKGROUND

### Ph.D. Petrophysics & Geophysics

Earth Sciences, Ben-Gurion University of the Negev, 2022

### M.Sc. (honors) & B.Sc.: Engineering Geology

Ben-Gurion University of the Negev

### Head of Research, Defense Division, Matrix

Leads R&D teams in AI & ML, geospatial data and analytics · 2021–present

### Engineering geologist and university lecturer

Site investigations for major infrastructure (Geo-Log) · 8 courses in geology & geophysics (BGU)

SELECTED PUBLICATIONS

**Journal of Petroleum Science and Engineering, 2020**

Anisotropy evolution during early maturation of organic-rich carbonates

**SPE Annual Technical Conference & Exhibition, Dubai, 2021**

Relating acoustic anisotropy to kerogen content in unconventional formations

**Ph.D. thesis, 2022**

Remote detection of thermal maturation in source rocks using seismic anisotropy

Drillzy

# A mine that learns as it works.

Every meter drilled improves the next decision.

**WE ARE LOOKING FOR**

- **Pilot sites**
- **Strategic partners**
- **Investors**
